

AIRFEED

ONE SYSTEM TO FEED THEM ALL

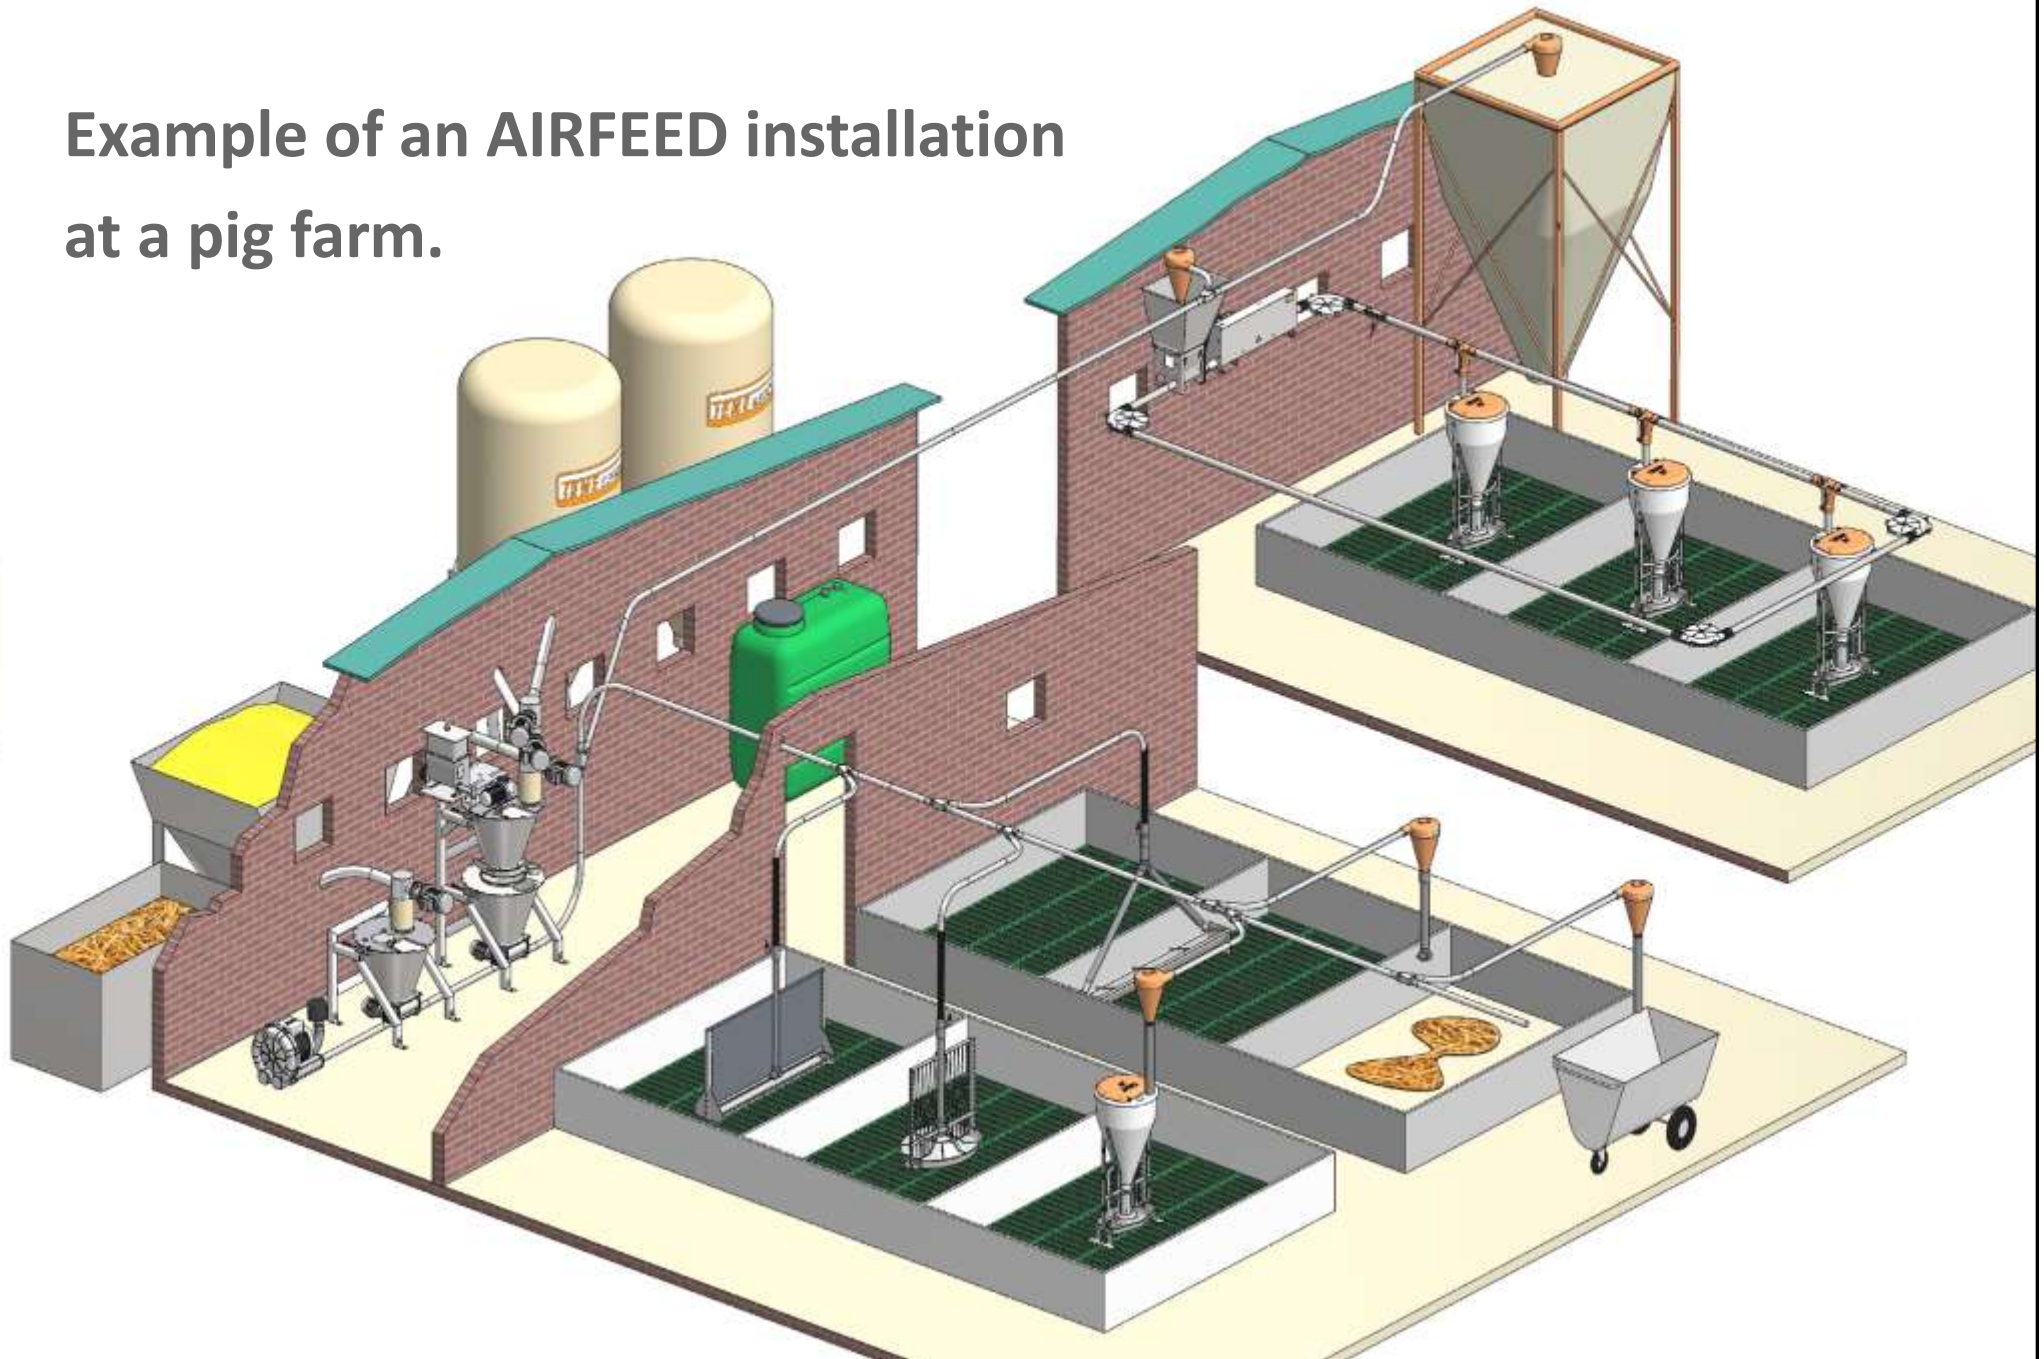

AIRFEED product line

AIRFEED is a professional and fully automated feeding system providing individual feed valves as well as complete feeding troughs by means of a pneumatic conveyor system. The quantity and type of feed components are programmed in advance following the individual needs of the animals. The feed is quickly distributed by use of a solid and long-lasting pipe system.

Example of an AIRFEED installation at a pig farm.

KONUS mixer

Mixing stations

Modular construction opens up a variety of installation possibilities and allows for customized configurations adapted to number and nature of the animals to be fed.
